The invention discloses the isolated human polypeptides, and polymucleotides encoding them, that have been designated SECX and NOVX. The polymucleotides can be used for treating, or delaying, the onset of an engiogenic-associated disorder or treating a pathological state in a sugiogenic-associated disorder or treating a pathological state in a subject, preferably a mammal. They can also be used in determining the presence of, or predafaposition to, a disease associated with altered levels of the polypeptides and polymucleotides of any one of the 12 sequences (SEC1-12), for raising antibodies, for identifying an agent that modulates the expression or activity of the polypeptide, or treating or preventing a NONX-associated disorder (NOV1-8) and as a pharmaceutical composition comprising the polypeptide, or treating or preventing a mounts are assessed, or for the manufacture of a medicament (e.g. gene therapy) for treating or preventing disorders or syndromes such as developmental disorders, immune diseases, singual transduction pathway disorders, metabolic disorders, neurodegenerative disorders (including Alzheimer's disease and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Human SECX/NOVX polypeptide useful for diagnosing, preventing or treating disorders associated with aberrant expression or activity of SECX/NOVX nucleic acids and proteins e.g., diabetes.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ò
                                                                                                                                                            the cancerous state of prostate cells. Also disclosed is a method of assessing whether a patient is afflicted with prostate cancer. The method of the invention involves assessing whether a patient is afflicted with prostate cancer. The method prostate cancer by comparing the level of expression of a marker in a control non-prostate cancer sample, where a significant increase in the level of expression of the marker in a level of expression of the marker in a level indicates that the patient is afflicted with prostate cancer. Nucleic eacles of the invention are useful for diagnosing or treating prostate cancer, and may be useful in gene therapy. Sequences given in ADB7517-ADB7531 represent marker cNNA and proteins. Note: The sequence data for this patent did not form pat of the printed specification, but the wipo.int/pub/published_pct_sequences.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    356
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           This protein sequence comprises human cysteine rich protein 61 (Cyr61), an extracellular matrix signalling molecule. Its amino acid sequence was deduced from a human placental cDNA clone (see AAP94699). Cyr61 bolypeptides can be expressed in transformed or transfected host cells. Cyr61 can be used to modulate haematostasis, induce wound healing in a tissue, promote organ regeneration, improve tissue grafting or promote bone or prothesis implantation (claimed). Ic can also be used to screen for a modulator of angiogenesis, chondrogenesis, oncogenesis, cell adhesion, cell migration, cell proliferation, expand a population of undifferentiated haematopoietic stem cells in culture and to screen for a mitogen (claimed). Ex vivo methods for using mammalian extracellular matrix signalling molecules to prepare blood products are also provided
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                358

involved in cellular response to growth factors. More particularly the invention is directed to cysteine-rich protein (Cyfsi), and Cyfsi-related proteins such as fibroblast secreted protein (Fispl2) and connective tissue growth factor (CTGF) and mucleic acid molecules encoding such secreted proteins. The polypeptides of the invention are members of cysteine-rich secreted protein family. Human Cyfsi fragment is useful in methods for screening modulators of cell adhesion, cell migration, fibroblast cell proliferation, angiogenesis, wound healing and Cyfsi-integrin receptor interaction is used for the preparation of a medicament for the treatment of atherosciencial sesciated with inadequate angiogenesis, tumour growth, disorders associated with inadequate angiogenesis; aberrant granulation tissue development; aberrant fibroblast growth and wounds. Polynucleotides of the invention are useful in gene therapy. The present sequence is human
                                                                                                                                                                                                                     Cysteine-rich protein, Cyr61; extracellular matrix signalling molecule; fibroblast secreted protein; Fisp12; connective tissue growth factor; CTGF, ECM; cell adhesion; cell migration; fibroblast cell proliferation; angiogenesis; wound healing; integrin receptor; atherosclerosis; tumour; heart disease; fibrosis; gene therapy; human
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The invention relates to extracellular matrix (ECM) signalling molecules
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Novel human cysteine-rich protein 61 (Cyr61) fragment useful in methods for screening for modulators of cell adhesion, fibroblast cell proliferation, anglogenesis and cell migration.
                                                                                                                                                                                                                                                                                                                                                         Location/Qualifiers

SCGF has vulnerary and osteopathic activities, and can be used gene therapy. The SCGF polypeptides and polymucleotides can be used for treating muscle wasting diseases, and osteoporosis, and to stimulate

U. Biol. Chem. 275:28929-28936(2000).

U. Biol. Chem. 275:28929-28936(2000).

I. FUNCTION: Promotes cell proliferation, chemotaxis, angiogenesis and cell adhesion. Appears to play a role in wound healing by upregulating, in skin fibroblasts, the expression of a number of genes involved in angiogenesis, inflammation and matrix remodeling including VBGA-A, VBGA-C, MMP1, MMP3, TIMP1, uPA, PAI-1 and incepting alpha-3 and alpha-5 (By similarity). Cyr61-mediated gene regulation is dependent on heparin-binding (By similarity). Downregulation is dependent on heparin-binding (By similarity). Downregulates the expression of alpha-1 and alpha-5 subunits of collagen type-1 (By similarity). Promotes cell adhesion and adhesive signaling through integrin alpha-1/beta-3 and cell proliferation through integrin alpha-1/beta-3 and cell proliferation through integrin alpha-1/beta-3 and cell proliferation through integrin alpha-1/beta-3 (By similarity).

SUBUNIT: Interaction with integrins is heparin- and cell-type-dependent and promotes cell adhesion (By similarity).

SUBJUARITY: Belongs to the CCN femily.

SIMILARITY: Contains I TGPB domain.

SIMILARITY: Contains I TSP type-1 domain.

SIMILARITY: Contains I TSP type-1 domain.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     This SWISS-PROT entry is copyright. Alpha vbeta 5 and enhances mitogenesis through integrin alpha vbeta

RET J. independent of its carboxyl-terminal domain.";

RET J. independent on heparin-binding. Down-regulated gene regulation is dependent on heparin-binding. Down-regulates the expression of a long-alpha-1 and alpha-3 and alpha-5. Cyr61-mediated gene regulation is dependent on heparin-binding. Down-regulates the expression of a long-alpha-1 and alpha-2 subunits of collagen type-1. Promotes cell migration through integrin alpha-V/beta-3.

CC -1 SUBULIATI Interaction with integrin alpha-V/beta-3.

cell adhesion and migration through integrin alphavbeta3, promotes endothelial cell survival, and induces angiogenesis in vivo.";
Mol. Cell. Balol. 19:2588-2966(1999).
-! FUNCTION: Major connective tissue mitoattractant secreted by vascular endothelial cells. Promotes proliferation and differentiation of chondrocytes (By similarity). Mediates heparinand divident cation-dependent cell adhesion in many cell types including fibroblasts, myofibroblasts, endothelial and epithelial cells (By similarity). Enhances fibroblast growth factor-induced DNA synthesis (By similarity).
-! SUBUNIT: Monomer (By similarity).
-! SUBUNIT: Monomer (By similarity).
                                                                                                                                                                                                                                                                                       soluble form.

-! TISSUE SPECIFICITY: TESTIS, SPLEEN, KIDNEY, LUNG, HEART, AND BRAIN
-! CLOWEST LEVEL IN TESTIS AND HIGHEST IN LUNG).
-!- INDUCTION: By growth factors.
-!- SIMILARITY: Belongs to the CCN family.
-!- SIMILARITY: Contains 1 IGFBP domain.
-!- SIMILARITY: Contains 1 TSP type-1 domain.
-!- SIMILARITY: Contains 1 TSP type-1 domain.
-!- SIMILARITY: Contains 1 C-terminal cystine knot-like (CTCK) domain.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  DNA synthesis; Extracellular matrix; Heparin-binding;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             EMBL; M70641; AAA37627.1; ---

T factor (CTGF) containing module 4 alone stimulates cell adhesion.";

L J. Endocrinol. 176:R1-R7(2003).

-!- FUNCTION: Major connective tissue mitoattractant secreted by vascular endochelial cells. Promotes proliferation and divalent cation-dependent cell adhesion in many cell types including fibroblasts, myofibroblasts, endochelial and epithelial cells.

Enhances fibroblast growth factor-induced DNA synthesis.

-!- SUBGNILT: Monomer.

-!- SUBCELLUTAR LOCATION: Found in the extracellular matrix and as a soluble form (By similarity).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Name=1; Synonyms=Long;

- FUNCTION: Major connective tissue mitoattractant secreted by vascular endothelial cells. Promotes proliferation and differentiation of chondrocytes (By similarity). Mediates heparinced and divalent cation-dependent cell adhesion in many cell types including fibroblasts, myclibroblasts, endothelial and epithelial cells (By similarity). Enhances fibroblast growth factor-induced CC orluble form (By similarity).

- SUBGNIT: Monomer (By similarity).

- SUBGNIT: Monomer (By similarity).

- SUBGNIT: Monomer (By similarity).

- SUBGNIT: Contains 1 (GFBP domain.

- SIMILARITY: Contains 1 (GFBP domain.

- SIMILARITY: Contains 1 TSP type-1 domain.

- SIMILARITY: Contains 1 TSP type-1 domain.

"Purification and characterization of novel heparin-binding growth factors in uterine secretory fluids. Identification as heparin-
Education uterine secretory fluids. Identification as heparin-
Education uterine secretory fluids. Identification as heparin-
Education of connective tissue growth factor.";

"PUNCTION: Major connective tissue mitoattractant secreted by vascular endothelial cells. Promotes proliferation and differentiation of chondrocytes (By similarity). Mediates heparin-
and divalent cation-dependent cell adhesion in many cell types including fibroblasts, myclibroblasts, endothelial and epithelial cells (By similarity). Enhances fibroblast growth factor-induced DNA synthesis (By similarity).

"SUBJUNIT: Monomer (By similarity).

"SUBJUNIT: Monomer (By similarity).

"SUBJUNIT: Monomer (By similarity).

"STMILARITY: Contains I IGPBP domain.

"SIMILARITY: Contains I IGPBP domain.

"SIMILARITY: Contains I TSP type-1 domain.

"SIMILARITY: Contains I TSP type-1 domain.

Submitted (AuG-1994) to the EMBL/GenBank/DDBJ databases.

-!- FUNCTION: Immediate-early protein likely to play a role in cell
growth regulation (By similarity).

-!- SUBCELLUININ: Secreted (By similarity).

-!- SIMILARITY: Belongs to the CCN family.

-!- SIMILARITY: Contains 1 IGFBP domain.

-!- SIMILARITY: Contains 1 TSP type-1 domain.

-!- SIMILARITY: Contains 1 TSP type-1 domain.

-!- SIMILARITY: Contains 1 C-terminal cystine knot-like (CTCK) domain.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Eukaryota, Metazoa, Chordata, Craniata, Vertebrata, Euteleostomi,
